MyCA Mobile — Screen Deck

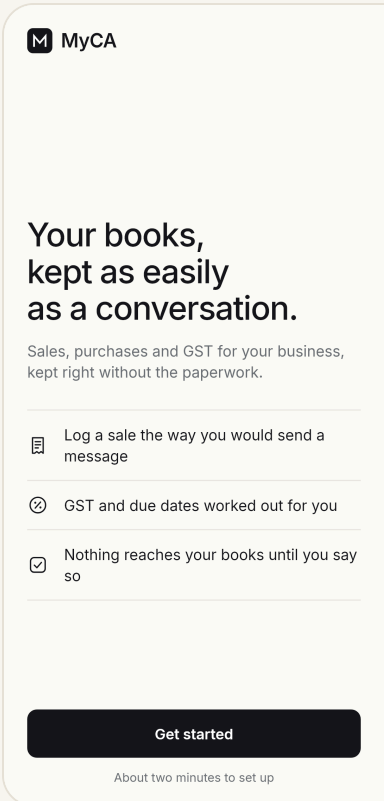

Owner app for Android (application id `com.mldynamic.myca`) with iOS project in the same checkout. Books are organised like a messenger: registers, then one thread per customer or supplier. Every number comes from the server; the app only formats and orders. Nothing posts until a preview is confirmed.

ONBOARDING · WELCOMESCREEN

01 — Welcome

First-run promise screen: “Your books, without the bookkeeping.” Messenger metaphor up front — sales, bills and expenses with the taxes handled. Single CTA “Get started”.

- What it proves: brand, positioning, no login wall on first run.
- Next: “Where are your books?” migration picker.

Flow: Welcome → 02 migration paths → 03 business → 04 import → Home

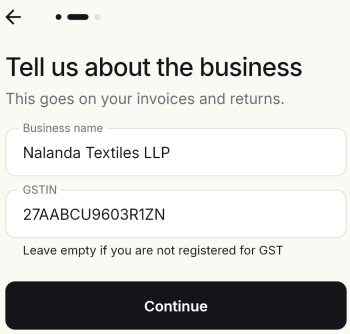

ONBOARDING · MIGRATIONFLOW

02 — Where are your books?

The migration fork. Tally, Zoho Books, another billing app, Excel/Sheets, paper or CA, or starting fresh. Each path offers only the imports the server can actually parse (Day Book CSV, TallyPrime XML, bank statement, invoice CSV). Direct Vyapari/Khatabook/Busy/Marg import is explicitly not built.

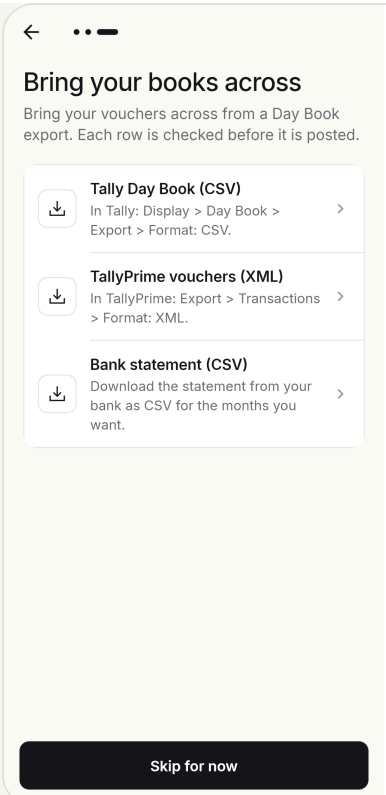

- Why it matters: sets expectations before any file is picked.
- Files upload first and imports refer to them by hash — contents never sit in a pending preview.

ONBOARDING · BUSINESSSETUP

03 — Business

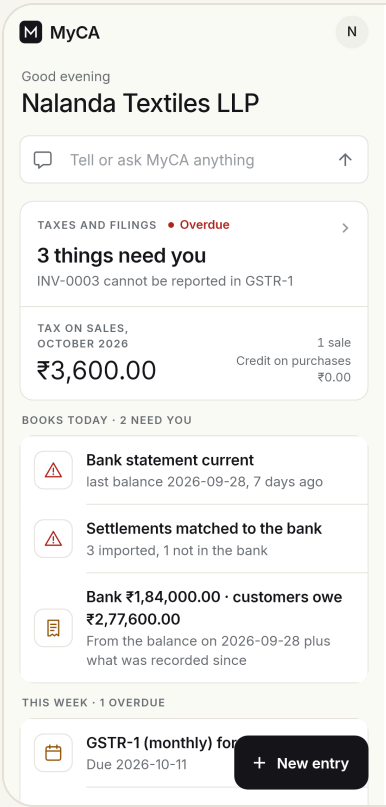

Minimal business capture: name, phone, GSTIN with “Look up” validation. Skips straight to “Continue”. Country branching happens here later (IN vs US tax tracks).

ONBOARDING · MIGRATION OFFER

04 — Bring your books across

Concrete next step for the Tally path: Day Book CSV, TallyPrime XML, bank statement. Copy is honest — sheet keeps only sale, purchase and expense rows; payroll comes later. Skip option preserves the fresh-start path.

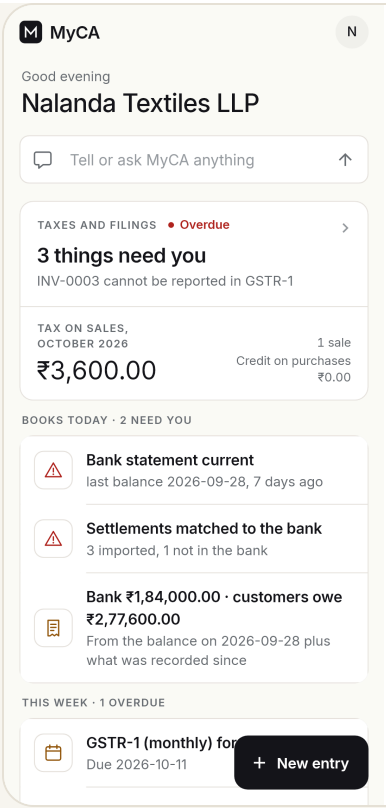

DAILY · HOMESCREEN

05 — Home

The operating dashboard: greeting plus business name, Ask bar (“Tell or ask MyCA anything”), Taxes-and-filings panel (“3 things need you”), “Books today · 2 need you”, week ahead, due-today reminders, month summary (Sold / Bought / Spent with prior-period compare, owed to you / you owe), then “Your books” registers and “Money and follow-up” (Cash, Marketplace, Reports, Your CA, Reminders, Books check).

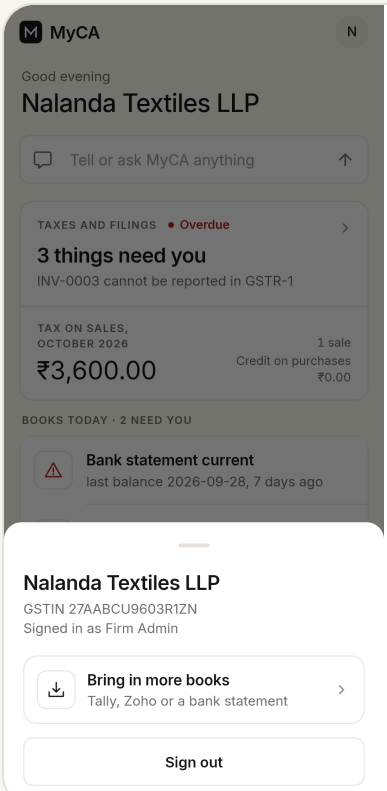

- Data: daily_close, week_ahead, today, business summary — all server-computed.
- FAB: “New entry” is the primary creation path.

DAILY · EMPTY STATE

05c — Home on the first day

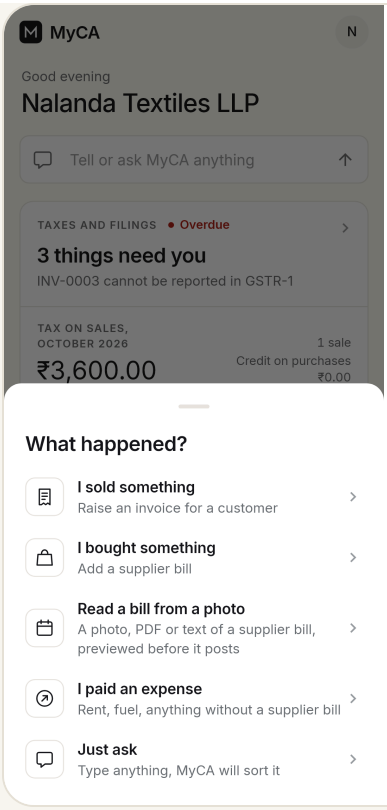

Same shell with empty books: “Log your first sale” card, “You are all caught up” taxes panel, zeroed month figures. Prevents the cold-start stall.

DAILY · BUSINESSSHEET

05b — Business menu

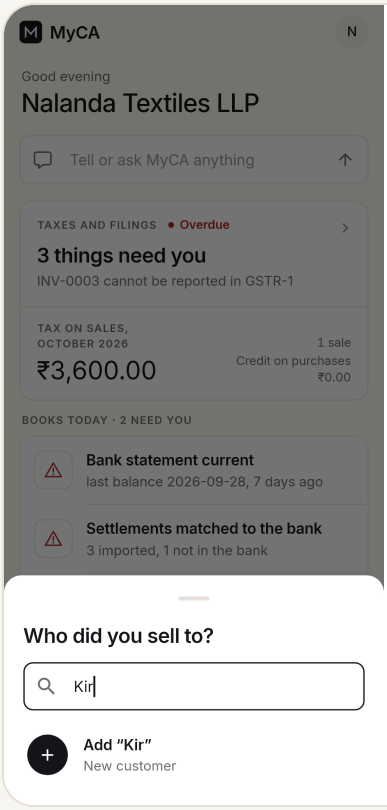

Bottom sheet for identity and mode switching: business name, “This business deducts TDS”, hosted/local toggle (“Use this phone with the hosted service” vs “Use with MyCA on your computer”), business switcher, people and invitations, connections to banks and apps, lock control, sign-out. Lock toggle lives behind the app lock.

CAPTURE · NEWENTRYSHEET

06 — New entry

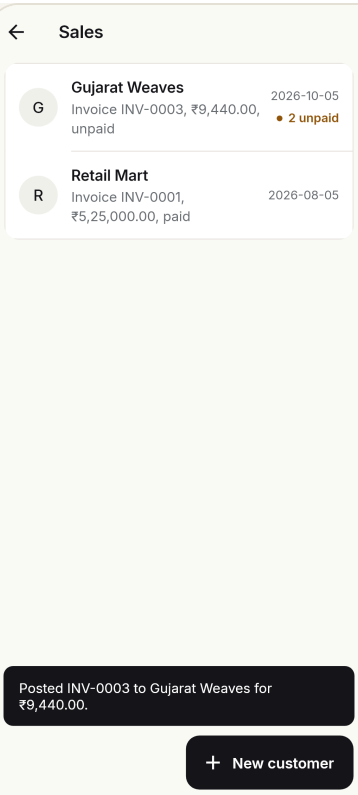

Five-way capture: sold something, bought something, paid for an expense, “bill to pay later…”, “ask or tell MyCA”. One thumb reach from the FAB; routes to party picker or Ask.

CAPTURE · PARTYPICKER

07 — Who did you sell to?

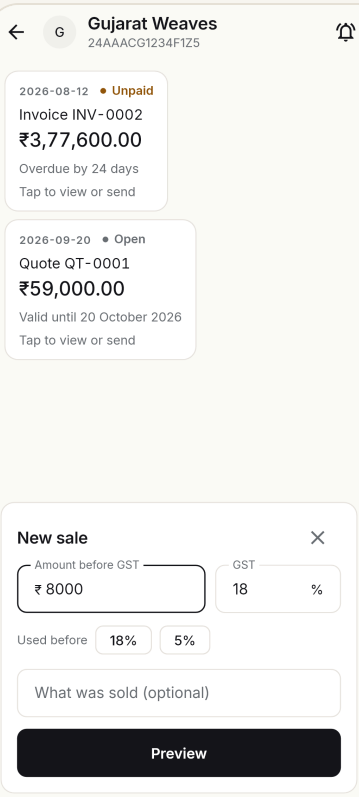

Customer search with recency-ranked threads (“Gujarat Weaves · owes ₹3.3L · Oct 2026”). Typing filters; “New customer …” creates inline. Same pattern reused for suppliers.

REGISTERS · REGISTERSCREEN (SALES)

08 — Sales register

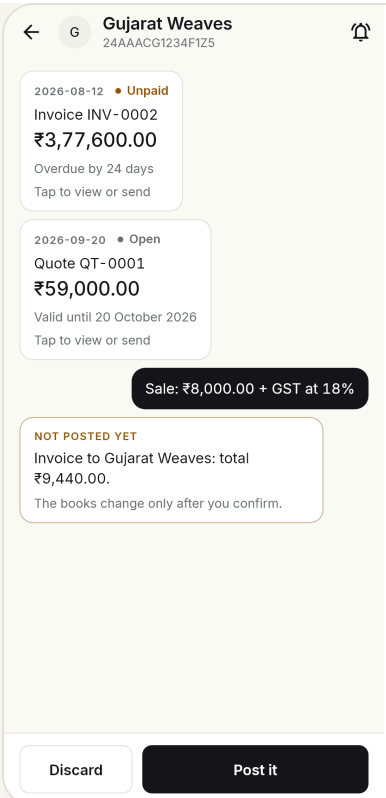

All sales in one thread list: customer name, invoice id, amount, status chip (Paid / To receive with due-in days / Overdue), search and GST filter. Entry point to party threads and quotes.

CAPTURE · INVOICE FORM

09 — New sale

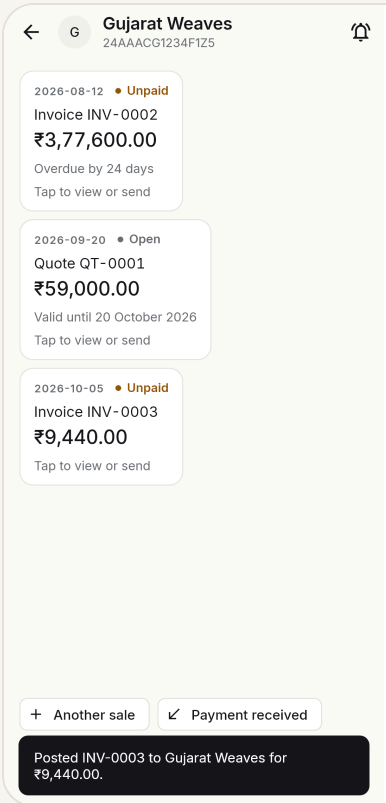

Structured args for /api/propose: date, amount before GST, rate chips (0/5/12/18/28%), place-of-supply note, HSN hint (“Check with your CA before filing”). Preview CTA computes the engine preview; nothing posts here.

CONFIRM · PROPOSALFLOW

10 — Not posted yet

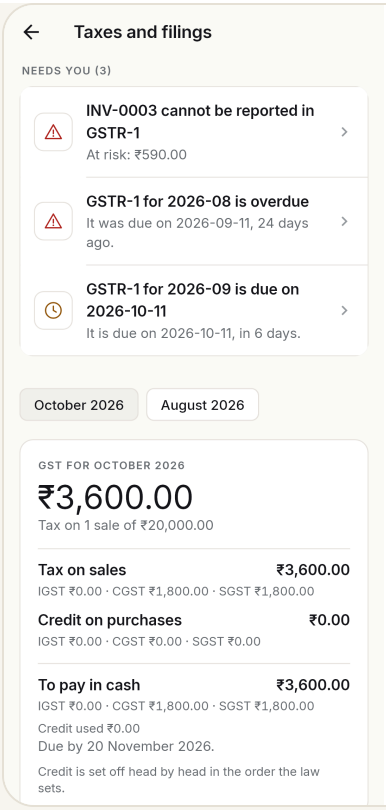

The thin-client contract made visible: dark summary bubble plus gold “NOT POSTED YET” card with the exact proposed entry (“Sale of ₹8,000 to Kir … dated 28 Oct 2026”). Books change only after “Post it”; “Discard” drops the one-use token.

CONFIRM · POSTED

11 — Posted

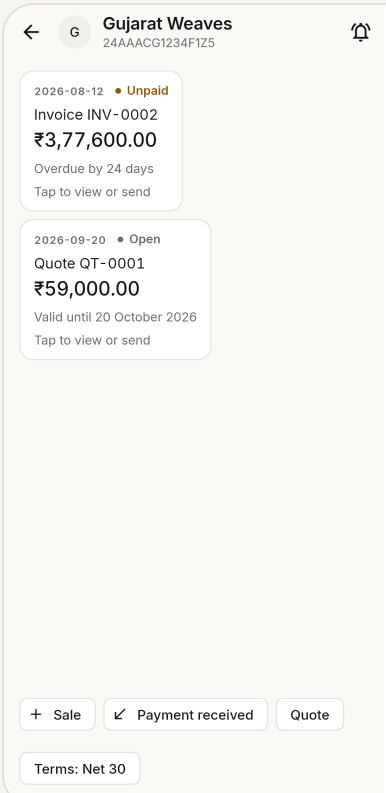

Success state of the same sheet: “Posted” confirmation card, invoice id assigned (INV-0010), totals restated. Party thread and registers refresh from the server snapshot.

TAXES · TAXESSCREEN

12 — Taxes and filings

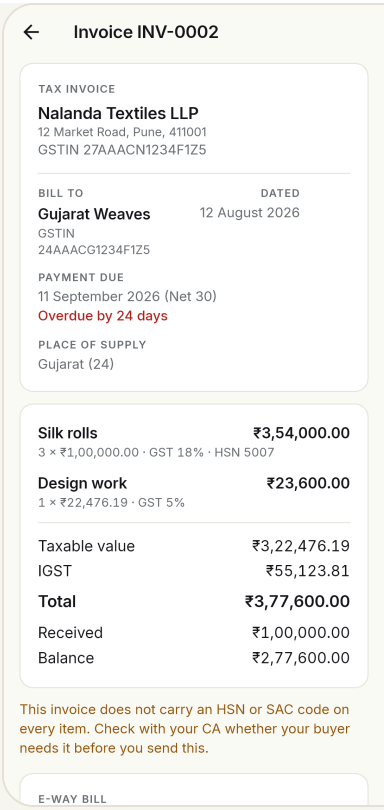

Return hub: GSTR-2B import banner, “Review the return” primary action, GST payment, CA pack exports (filing pack, trial balance, TDS, Tally file, year close), TDS section, FILED section for portal-recorded filings. Review is step-gated; filing itself stays on the portal or with the CA.

THREADS · PARTYSCREEN

13 — Customer thread

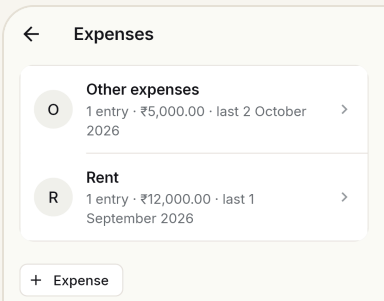

One customer, one thread: balance owed, quote (QT-0001), invoices (INV-0002). Each entry shows state (To receive, 10 days left). The messenger metaphor lands here — scroll the relationship, tap any entry for detail.

DOCUMENT · INVOICESCREEN

14 — Invoice detail

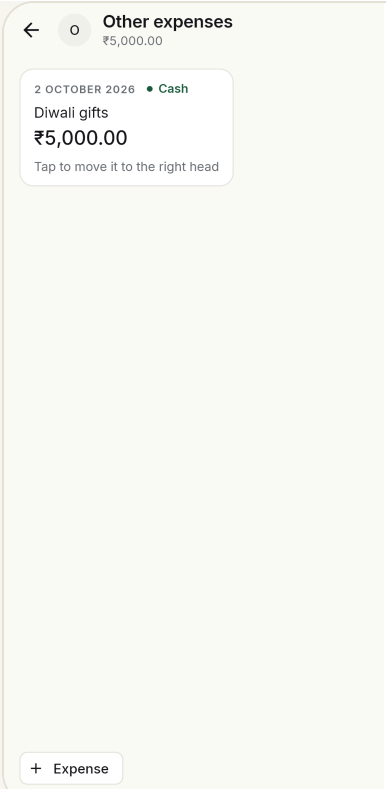

Full invoice view: balance, HSN/SAC warning, e-way bill card when interstate value crosses ₹50,000, share via the owner's own WhatsApp/email (MyCA sends nothing itself), PDF print/save, and corrective actions — Remind me, Ask CA, Credit note, Debit note, Cancel. Corrections are new entries; the invoice is never edited in place.

REGISTERS · EXPENSESSCREEN

15 — Expenses

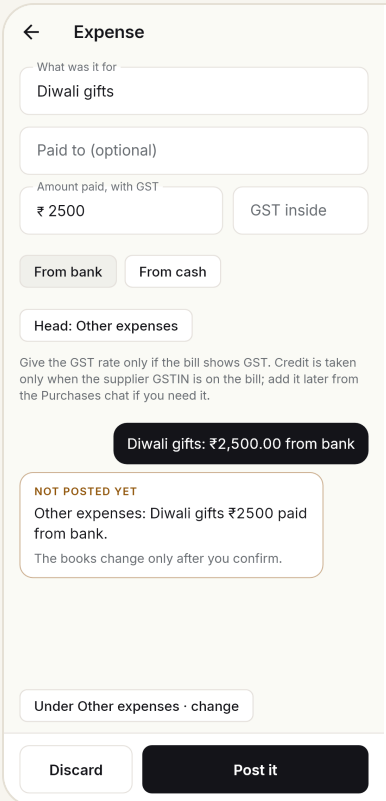

Heads (Rent, Fuel, Other) with month spend and bill counts, plus a "New expense" FAB. Routes to the head picker then the expense form.

CAPTURE · EXPENSE HEAD

16 — Expense head

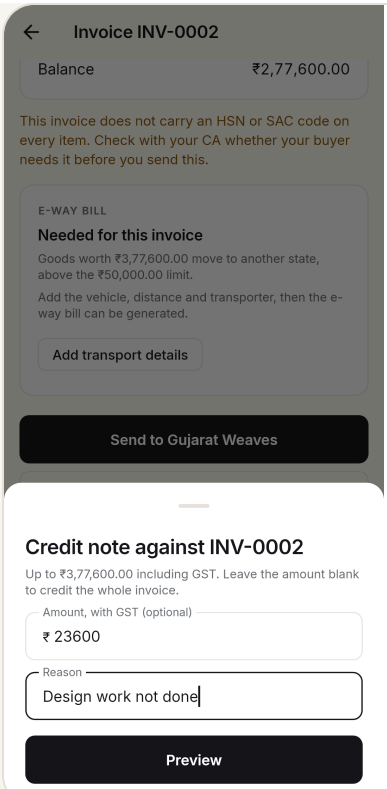

Small but important choice: Expense vs Asset changes posting. Head chips (Rent/Fuel/Other) carry the description hint forward.

CONFIRM · EXPENSE PREVIEW

17 — Expense preview

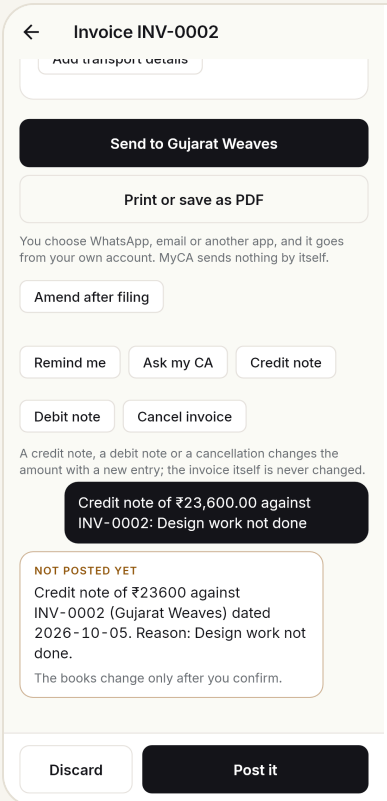

Same propose/confirm contract as sales: dark “Expense of ₹2,500 … cash” bubble, gold NOT POSTED YET card (“paid 2,500 for Diwali gifts on 28 Oct 2026”), Discard / Post it. Cash vs bank mode is explicit at entry.

CORRECT · CREDIT NOTE FORM

18 — Credit note entry

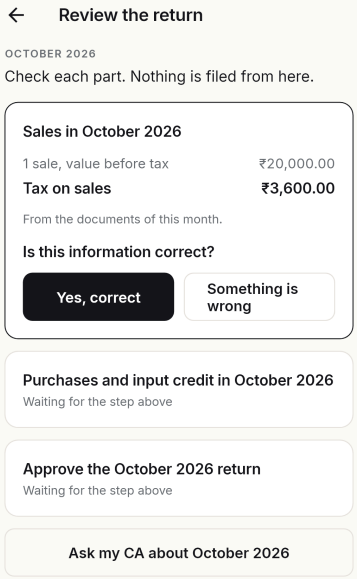

Bottom-sheet correction against INV-0002: optional partial amount (blank = whole invoice), mandatory reason. Up-to cap shown including GST.

CONFIRM · CREDIT NOTE PREVIEW

19 — Credit note preview

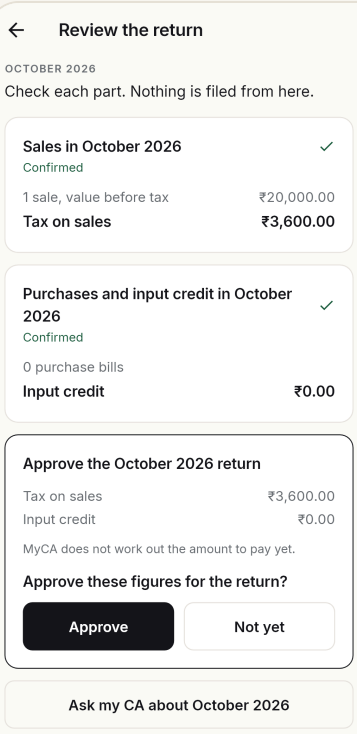

Correction preview with the same guarantees: “Credit note of ₹23,600 against INV-0002 … Reason: Design work not done”, not posted until confirmed. Preserves the append-only ledger — new entry, never an edit.

REVIEW · GSTR-1 STEP 1

20 — Review the return (sales)

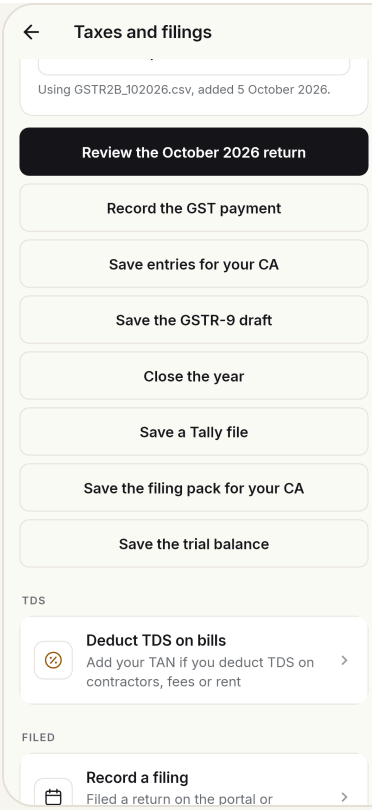

Maker-checker review, step by step: sales value and tax from this month's documents, "Is this information correct?" with Yes / Something-is-wrong. Purchases and approval wait on this step. Nothing is filed from here.

REVIEW · APPROVE

21 — Approve the return

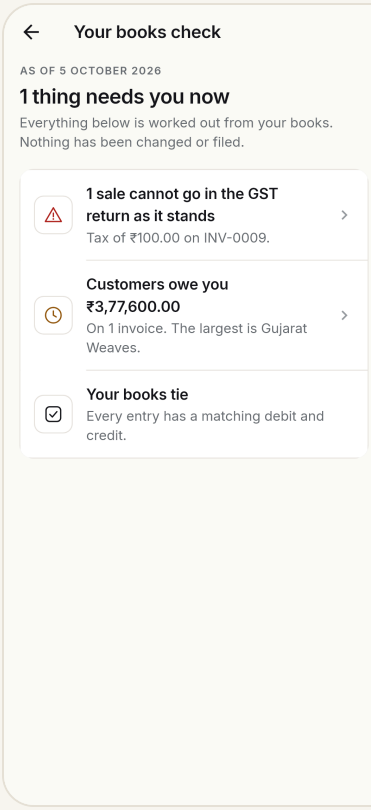

Final gate: both steps confirmed, figures restated (tax on sales, input credit), explicit "MyCA does not work out the amount to pay yet", Approve / Not yet. Approval records the reviewer; filing stays external with ARN recorded later.

RISK · GSTR-2B

22 — Input credit at risk (GSTR-2B)

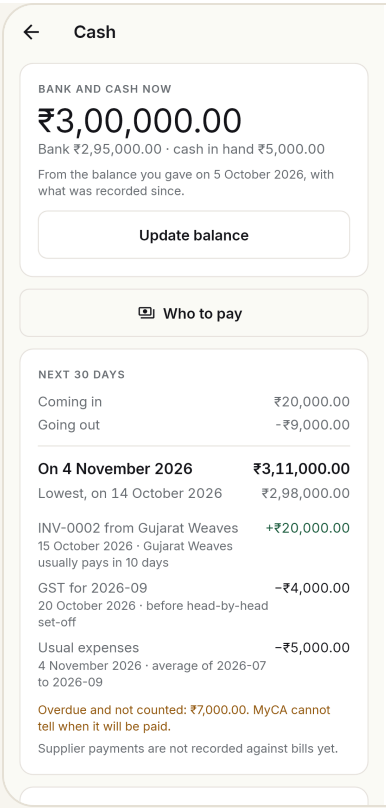

Reconciliation surfacing: credit claimed vs supplier-reported, “at risk” amounts per supplier/period. Drives the “chase the supplier before the reversal” action instead of silent ITC loss.

HEALTH · BOOKSCHECKSCREEN

23 — Books check

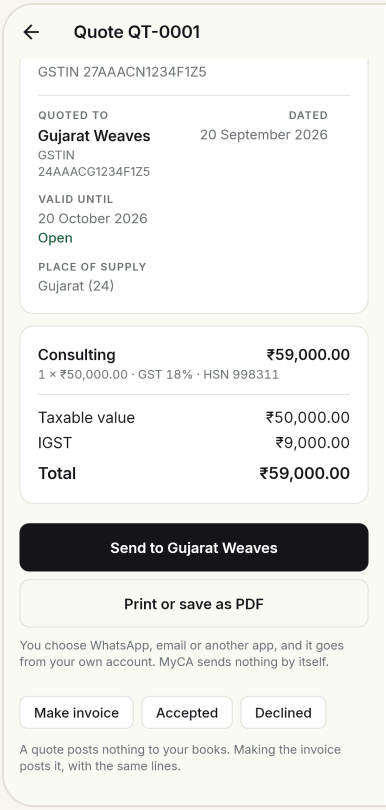

“What needs you, worked out from your books”: blocking issues (invoice that cannot go in the return), money states (customers owe you), and invariants (“Your books tie — every entry has a matching debit and credit”). Nothing changed or filed from here.

MONEY · CASHSCREEN

24 — Cash

Treasury view: bank + cash now from the last stated balance plus recorded movement, “Who to pay”, next-30-days projection (coming in, going out, projected and lowest balances with dated drivers), overdue excluded with the reason stated. “Can I afford it” without guessing.

DOCUMENT · QUOTE

25 — Quote QT-0001

Pre-book document: quoted-to GSTIN, validity, place of supply, line with HSN, tax split, share/PDF like an invoice — but “A quote posts nothing to your books. Making the invoice posts it, with the same lines.” Accept/Decline/Make-invoice are the only exits.

Built from `flutter test tool/screenshots_test.dart --update-goldens` on this checkout — 10 widget tests, 26 goldens in `tool/screens/`. Screens that exist but are not golden-rendered (need cloud or device): phone sign-in, Google/OIDC sign-in, name, business setup, businesses switcher, people and invitations, connectors

(Plaid/Gusto/TaxJar/channel sync), lock screen, Ask thread, reports, employees/payroll, marketplace, reminders, CA inbox, bill capture, filings and payments. See mobile/README “Not built yet” for the release gap list.
